

IDPH REDCap Data Entry – Addendum

Reactivation of Problem Identification and Referral Activity Code

Effective: November 2021

The STP03 Activity Code has been reactivated for IPN prevention contractors providing one-time services using the Problem Identification and Referral Center for Substance Abuse Prevention (CSAP) strategy.

Reactivated Problem Identification and Referral Activity Code

STP03 Student Assistance Program - Structured prevention programs intended to provide substance misuse information for participants with related problems that may be interfering with their daily lives.

Note: Direct service may involve assisting and training a school district and/or community agency in establishing a Student Assistance Program but not acting as the Student Assistance staff person. No screening or assessment for treatment may be conducted through prevention funding in the IPN grant.

Examples:

- Assistance with developing procedures for referring participants to a diversion program;
- Discussion about the benefits of diversion programs with community stakeholders;
- Information and resources for schools and/or community agencies about early identification of substance misuse problems.

Select the appropriate Universal Direct, Selective, or Indicated Institute of Medicine category. Participant demographics are reported as exact counts.
